

AMENDMENTS TO THE SPECIFICATION:

Please delete the current Abstract, and replace it with the following:

A program guide displaying apparatus has an information obtaining device for obtaining program information including information indicative of a program name, genre, start time, length or end time. Further included is a broadcasting channel and a broadcasting date of one of a plurality of programs and a setting device for setting a specific condition with respect to a time and/or channel of the program. Additionally, the apparatus contains a displaying device for displaying a first program table, in which a plurality of program information for the programs are displayed in a time axis and a channel axis. Also, a second program table can be displayed, in which program information for the programs are edited for each genre, such that a portion of each program within the first program table and a portion of each genre within the second program table are displayed in a common display manner.
